

R & D of CCT(LRC)

-STATUS AND PROSPECTS OF UTILIZATION-

WHY DOES JAPAN DEVELOP TECHNOLOGIES FOR LOW RANK COAL UTILIZATION?

Two Objectives in Coal Policy of Japanese Government:

- 1. Selling Japanese technologies for low rank coal utilization. As results, expanding usable coal resources
- 2. Not only selling Japanese technologies but also investing the project using the technologies for low rank coal utilization, and exporting products made by the project to Japan.

Concept of Good Theme and Good Business #JCOAL

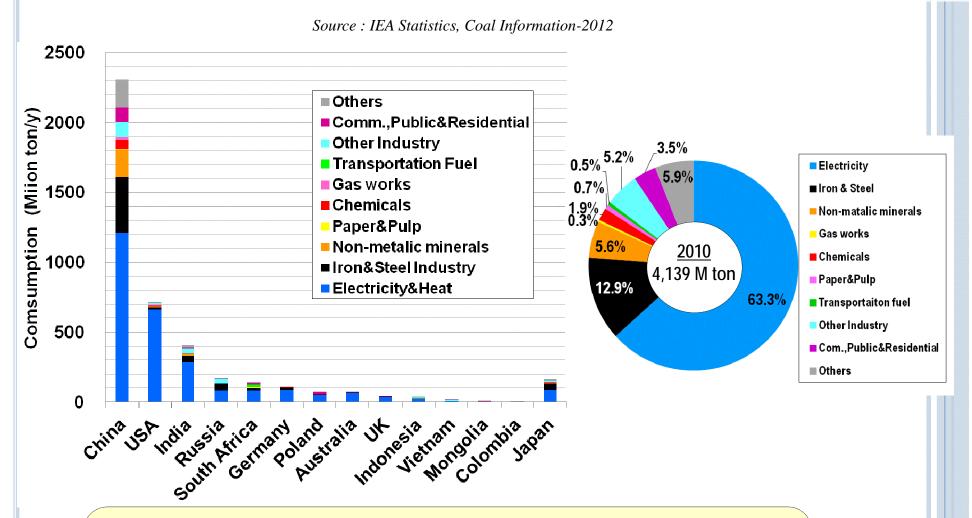

- ② Evaluation of added Value Technology
 - ◆Check of R & D Trend
 - Find out the Lack of Technology to Develop
- 1 Analysis of Basic Data and Information
 - Coal Resource, production & Aspect Utilization field

Good Theme & Good Business

- ③Evaluation of R & D Management
- ◆Past Technology & Present Technology
- Getting in International Operation
- Establish of Value Chan
- ◆ Up-and-Coming Sector of Utilization field ◆Policy to develop & Program to support by the producing
 - 4 Needs of Market

Coal Utilization Area in the World

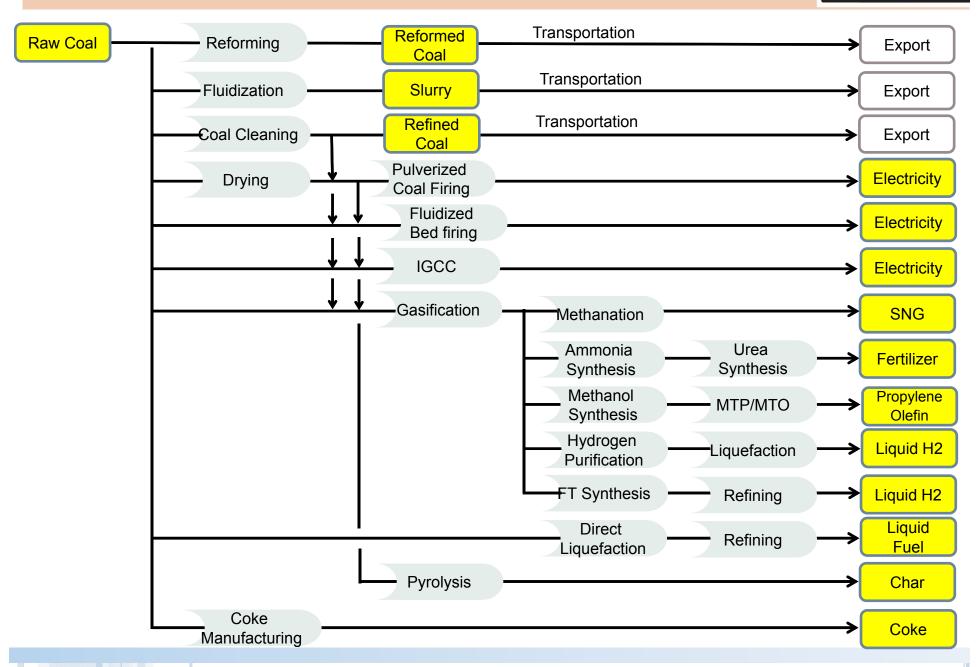

- Coal Consumption is mainly Power Generation and Iron field
- Most Important to develop the Electric Power Technology (Combustion etc.)
- 5 countries in EU: Ratio of Power Generation by Lignite is 30%

Value-chain of LRC

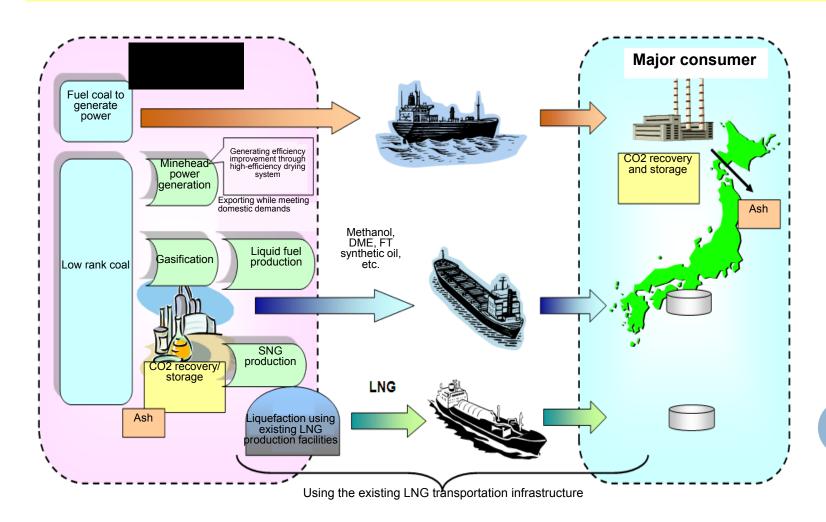

Effective utilization of low rank coal

- 1. Development of gasification technologies for low rank coal Methane/DME, etc. from gasification of low rank coal can contribute to supplying clean energy
- 2. Development of upgrading technologies for low rank coal Development of new dehydrating/drying technologies

Needs of Utilizing Technology for LRC in Producing Countries

			storong		normal		Weak/Potential							
Coal Producing country		Australia	China	Indnesia	Vietnam	Mongolia	India	Rossia	Germany	Poland	U.S.A.	Columbia	South Africa	Mozambiq
Pre- proces sing	Coal Cleaning		Air Pro- tection		Anthracite Export	Coking Coal Export	Demand Inclease							Coking Coal Export
	Drying	Use/High Moisture Coal	Gas Treat- ment	Use/High Moisture Coal					Use/High Moisture Coal	Use/High Moisture Coal				
	Reforming	Use/High Moisture Coal	Reformed Lignite	Alternativ e Black Coal									LRC Export	
	Liquidazatio n (CWM)		Alternativ Heavy Fuel	Outlier Fuel										
Combu stion	Pulverized Coal Firing	Brown Coal Power Station	USC DeNOx	Big Demand of Elect.		New Power Generation	New Power Generation	New Power Station	High Efficiency	High Efficiency	High Efficiency	High Efficien cy	High Efficiency	
	Fluidized Bed firing		Diversificati on of Raw Material	Small Despersal Elect. Supply		Use of Cleaning Residue	Use of Creaning Residue		Use of Lignite	Useof LRC	LRC Co- firing			
	IGCC		Elect.Deman d Increase	Green Electiric Power			Green Electiric Power		Green Electiric Power	Green Electiric Power	Green Electiric Power			
Gasification (Chemical Usage)			SNG/Chemic als,Coprodu ct	Fertilizer (SNG)	Fertilizer		Fertilizer		Chemicals	Fertilizer (SNG)	SNG/Chemi cal Coproducti on		FT Symthesis Fuel & Chemicals	
Liquefa -ction	Indirect Liqe.		SNG/Chemic als,Coprodu ct	Lack of Oil									FT Symthesis Fuel & Chemicals	
	Direct Liqui		Lack of Oil	Lack of Oil										
Coking			Semi- coke	Molding SCC		Semi- Coke	Semi- coke	Semi- Coke		Semi- coke				

Setting up of the Cost Target

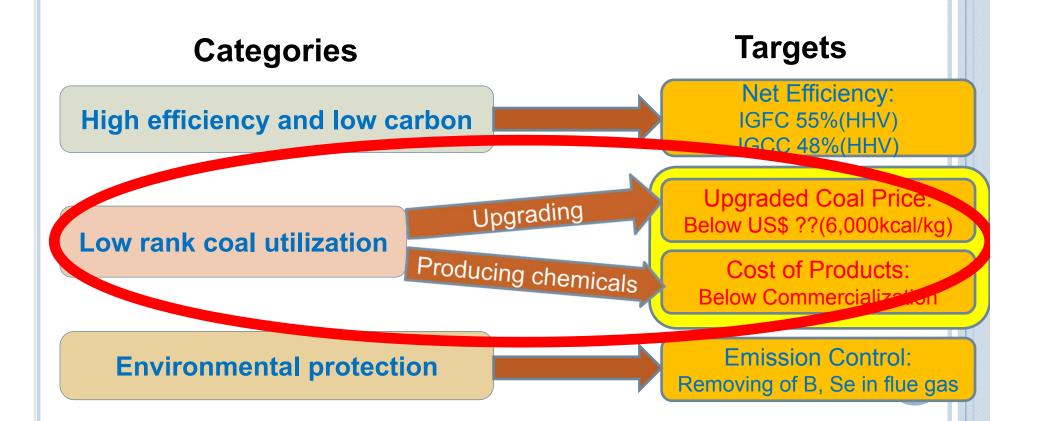

- It's indispensable to establish a target severely from an early stage of Demo. Plant stage about the cost performance of the technology.
- Technology quantifies the created additive value and establishes the cost target sincerely.
- A finite difference of the final product price and the raw coal price of LRC is defined as the added value by technology bears.
- It's important for adding up of the plant cost, the working expenses and the transport costs to fall below an additional value sufficiently.

TARGETS OF CCT ROADMAP

R&D OF LOW RANK COAL UTILIZATION TECHNOLOGIES IN JAPAN

Targets

Upgraded Coal Price: Below US\$??(6,000kcal/kg)

Cost of Products:
Below Commercialized product

Country Products Technology Company Indonesia Urea Gasification IHI **JGC** JCF(CWS) High Temp. water treatment SNG Gasification MHI **Pyrolysis** PCI MHI China SNG Gasification **NSENGI** Australia Hydrogen Gasification KHI **KEPCO** Australia Reformed Coal Pyrolysis

TIGAR® (FLUIDIZED BED GASIFICATION) BY IHI CORPORATION

Low Energy substance (Lignite and Biomass etc.), was difficult to use economically and technically, which is put to effective use in a chemical material and fuel by Gasification.

TIGAR 50t/d Prototype plant at Kujang in Indonesia

Background:

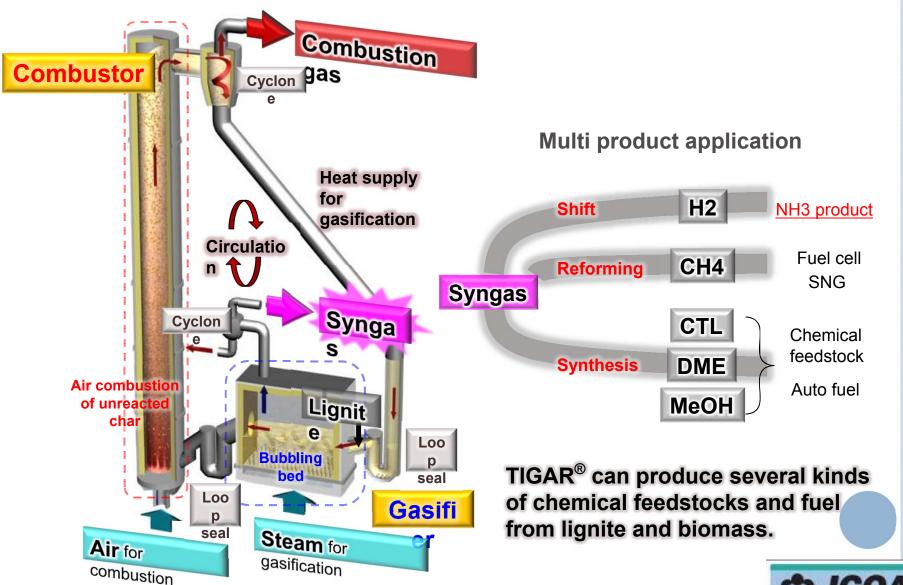

Production of Natural Gas (NG) in Indonesia, which is a major feedstock of fertilizer, is declining. LRC is abundant but not used effectively. Gasification of LRC as a back up of NG is expected.

Objectives:

To make implementation plan for conversion of fertilizer feedstock from NG into LRC

■ Components of TIGAR® are combined mature CFB and BFB technology.

*1 CFB: Circulating Fluidized Bed, *2 BFB: Bubbling Fluidized Bed

S JCOAL Japan Coal Energy Center

JCF Demonstration Plant

- ✓ JCF demonstration plant is located in Karawang.
- ✓ Production capacity of the demonstration plant is 10,000t/y.
- ✓ JCF demonstration plant was supported by Japanese government (JOGMEC and NEDO).

Coal Water Slurry by JGC Corporation

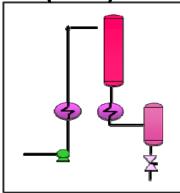

Lignite

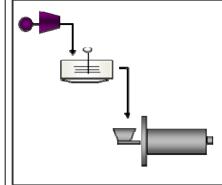

Upgrading (HWT)

Slurrification

Upgraded Coal Slurry

Liquid Fuel from Low Rank Coal

LRC ---- JCF®

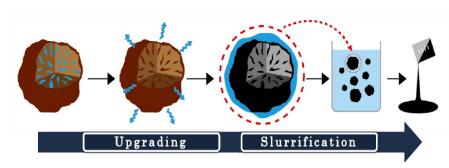

- · Abundant Resources, but
- Bulkv
- Low Calorific Value
- Spontaneous Ignition

- Liquid-type Fuel
- High Calorific Value
- Substitute for Oil/Gas

JCF® Properties

- Liquid type fuel similar to heavy fuel oil
- Closed storage / transportation
- Free from dust problems / spontaneous ignition

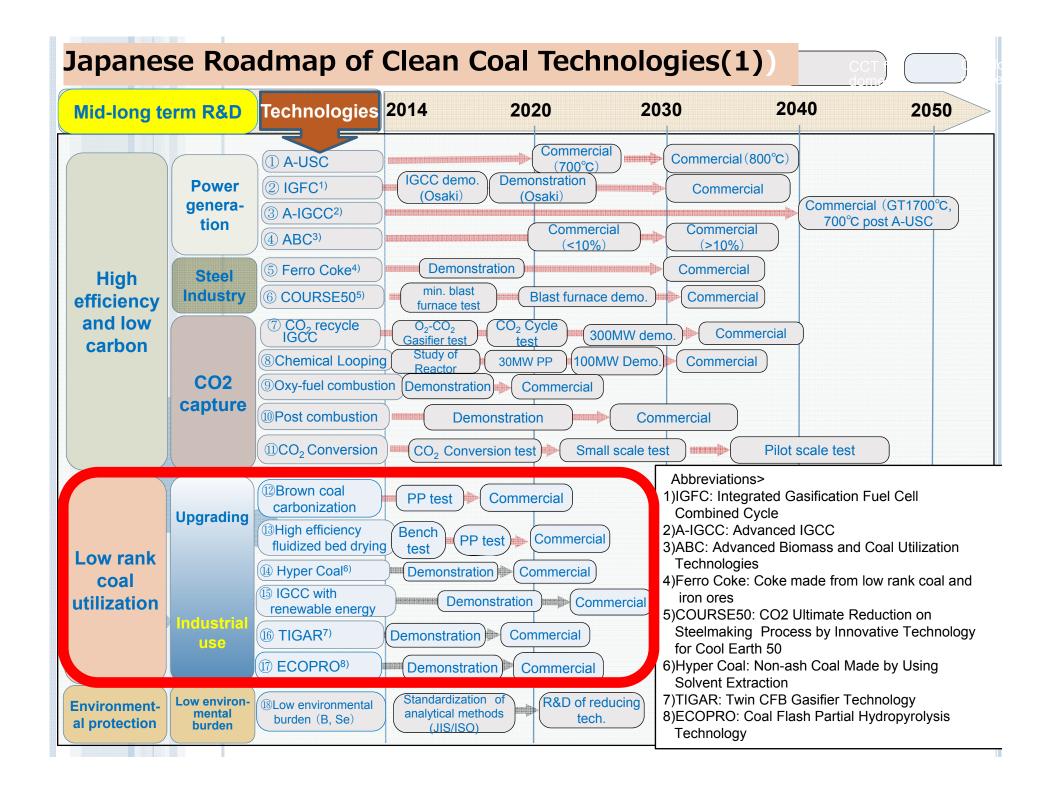

JCF® Properties

Calorific Value	4,000 - 4,500 kcal/kg
Coal Concentration	60 – 65 %
Density	1.2
Viscosity (25°C)	1,000cp
Mean Particle Size	20μm

CONCLUSIONS

- 1. The objectives for developing technologies for low rank coal utilization in Japan are:
 - to sell Japanese technologies
 - to supply fuels and chemicals produced from low lank coal with cheaper than commercial prices
- 2. TIGAR and JCF projects are carrying out in Indonesia by the Demonstration Plant and some projects are planning to start in near future.
- 3.JCOAL is studying the Road Map for Future Projects. and is promoting the R & D of CCT with member companies

Thank you for your attention!
